Missing Persons Database

*There are Two Versions: **Simple** & **Advanced**.*
*The **simple version** only displays records.*
*The **advanced version** allows changes to records.*

Simple Version

This JS database application represents a portable method of displaying the information about the people missing.

We can filter the results, by tag name, such as
```
if(myRecord[i].tag.indexOf("missing") != -1)
```

or
Patterns can also be found using the && operator.

```
    //How to Filter for 2 Criteria. Use the AND symbol.
 if((myRecord[i].tag.indexOf("missing") != -1) &&
    (myRecord[i].suspect.indexOf("John Doe") != -1))
```

<!-- All Rights Reserved Christopher Topalian Copyright 2020 -->

<u>Advanced Version</u>

Enables Editing of all fields.

Ability to Save .js file of all changes.

This enables investigators to document facts in a uniform manner, by presenting them with html and css and keeping the data stored using javascript OBJECT format.
